EDUCATION

Northeastern University

Master of Science in Information Systems

Boston, MA

Sep 2023 – Dec 2025

University of Mumbai

Bachelor of Engineering in Information Technology

Mumbai, India

Aug 2016 – May 2020

EXPERIENCE

Crewasis.ai

Full Stack Software Engineer

New York City, NY

Feb 2025 – Jun 2025

- Cut page load time **40%** in a **TypeScript** based **Next.js** application through code splitting, lazy loading and suspense boundaries across all production deployments
- Secured **S3** access by engineering presigned URL generation with file type, size and expiration validation enforced via **AWS IAM** policies, eliminating direct bucket exposure and extending scalable support to multi-format uploads and downloads
- Containerized the **Next.js** frontend and **Django** backend using **Docker** and pushed images to **AWS ECR**, enabling consistent and repeatable deployments across staging and production via **AWS ECS**
- Reduced backend request volume by **90%** through prefix-based **PostgreSQL** search queries, client-side caching and debouncing maintaining **sub-500ms** response times and improving system scalability in production

Capgemini

Software Engineer

Mumbai, India

Sep 2020 – Jul 2023

- Engineered an event-driven serverless gift card system on **AWS Lambda**, **DynamoDB**, **S3**, **SQS** and **API Gateway**, achieving a **99%** transaction success rate across 200 franchise locations with full **CloudWatch** observability
- Designed a **GraphQL** API layer replacing fragmented REST endpoints to unify **React.js** frontend and backend data access, cutting average response times from **2s to 450ms** in production
- Architected a distributed **RESTful microservices** layer with **OOPs** design and **Swagger/OpenAPI** contracts during a SOAP-to-REST migration, improving Loyalty platform response times **30%**
- Optimized **DynamoDB** schema and access patterns using **GSI/LSI** indexing strategies and introduced **DAX** as an in-memory cache layer, reducing data-access latency by **40%** across high-traffic query APIs
- Shipped features through **CI/CD** pipelines on **Azure DevOps** with **CloudFormation** and Serverless Framework, gating every PR on test coverage and build validation in an **Agile** team

SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, C, SQL

Backend: Node.js, Express.js, Spring Boot, Django, Flask

Frontend: React.js, Next.js, HTML, CSS/SASS, Vite, Redux, WebSockets

Cloud and DevOps: AWS, Azure DevOps, Docker, Kubernetes, CI/CD, Serverless Framework

Databases and Tools: PostgreSQL, MongoDB, MySQL, Git, GitHub Actions, Jenkins, OpenAPI, Postman, Jira, SonarQube

PROJECTS

ContentFlow | *Python, CrewAI, Flask, ChromaDB, React.js, Vite*

- Built a 5-agent AI orchestration pipeline with **ChromaDB**-backed RAG for shared memory, automated 0–100 quality scoring, and threshold-based retry logic enforcing output standards
- Engineered dual-tier **LLM** failover (Gemini → Groq Llama) validated through real rate-limit failures, delivering publication-ready articles in **~5 minutes** via 3 custom NLP tools built on NLTK and TextBlob

AuctionHub | *Java, Spring Boot, PostgreSQL, WebSocket, React.js, Vite*

- Delivered a high-throughput bidding engine with tiered minimum increment logic and live bid propagation to all connected clients via **STOMP WebSocket** using SimpMessagingTemplate
- Implemented configurable anti-sniping logic that dynamically extends auction end time when bids land within a threshold window, broadcasting real-time extension events to all subscribers

Budgetly | *PostgreSQL, Django, Next.js*

- Built a full-stack budgeting app with a **Django** REST API over **PostgreSQL** and a **Next.js** frontend, implementing **JWT** authentication, a rule-based auto-categorization engine that classifies transactions on ingest, and an event-driven notification system that pushes real-time updates to **Recharts** dashboards with CSV/Excel/PDF export
